

MatriStem

Plastic Surgery Soft Tissue Site

Patient History:

Patient presented with melanoma of forehead (anesthesia contraindicated). MatriStem Plastic Surgery Matrix applied in place of skin graft. Soft tissue site remodeled within three months.

Features & Benefits:

- Porcine epithelial basement membrane promotes rapid soft tissue site remodeling
- Several collagen types and essential proteins support natural tissue healing
- Remodel and restore surgical site effectively to normal state and function
- Two-year shelf life
- Store matrix at room temperature

Indications:

MatriStem Plastic Surgery Matrix is intended for implantation to reinforce soft tissue where weakness exists, including, but not limited to the following procedures: tissue and body wall repair. The device is intended for one-time use.

Plastic Surgery Soft Tissue Site

Melanoma removed and surgical site prepared for application of MatriStem PSM.

One month post surgery, full thickness remodeling and surgical site edges are beginning to close.

Three months post surgery, full thickness remodeling has occurred.
